## SCIENCE ODYSSEY

The science odyssey is a journey we eagerly undertook to understand the world of science – the concepts, the basic principles and the uses and dangers of science. We have learned some interesting facts about travelling further into the great and fascinating ocean of SCIENCE

The children of GICL had worked on their individual projects with tremendous enthusiasm. The outcome of this rigorous research was acclaimed by all.

Preschool students also performed various experiments and explained with confidence, which surprised the parents.

The working models on "Multipurpose Bicycles" were appreciated by the

parents and the Chief Guest.

This year's crowd was really overwhelming and parents had good time visiting the classroom with exhibits. We thank the parents who worked wholeheartedly with their children to design science projects.

## PRE SCHOOL FIELD TRIPS

In continuation with the last week's topic of "Growing is fun", the children of Transition 1 had a fun filled hands on circle time experience; massaging, feeding, caring and dressing up a baby doll.

Some even went down the memory lane and remembered their infant days by saying, " Even my mummy did this when I was small, but now she doesn't!"

Children of Transition 2

went for a walk around the school vicinity.

Oh! What a wonderful day,  
Our children experienced in a different way,  
They were so happy and gay  
And had a lot to say.  
As one could see,  
The wetness of the bark of a tree,  
The smell of the mud,  
The flowers and the bud,  
Its important to keep our surroundings clean,  
As they learnt " Keep the city green".

"Actions speak louder than words" is what we believe in. A cleanliness drive was carried out in and around our classroom as a part of cognitive self science. Indeed an eventful week for our little ones!

## A Song for Science

While learning about the digestive system in science, grade 6 also enhanced their language skills by writing an interesting poem.

### DIGESTIVE SYSTEM

There's a digestive system in our body  
It can't come of our body.  
If you want to know about it,  
Listen to this melody.

Chomp! Chomp! Chomp!  
Says my mouth  
As the ingested food goes in and out.  
Along with saliva it forms a bolus

Which moves along the oesophagus.  
Into the stomach an entry they make  
Where enzymes and acids are ready to break.  
The bolus is now called the chime  
Where all the foods are

broken in their sweet time.  
Dropped into my small intestine  
The nutrients are taken away;  
Passing through my large intestine  
Where the water is absorbed they say.  
With only waste left  
Which is of no Use,  
It is thrown out of my body,  
In the form of refuse.....

**As a part of the CAS activity the IBDP year 2 students donated books to the Jain Kanyashala SNTD Ghatkopar**

**Forth coming events:  
Carrom tournament will begin from first week of July.**
